

# Mobile Application

## Assignable Role for an Android

### Selecting an Assignable Role

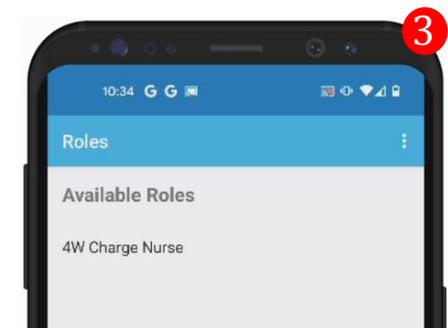

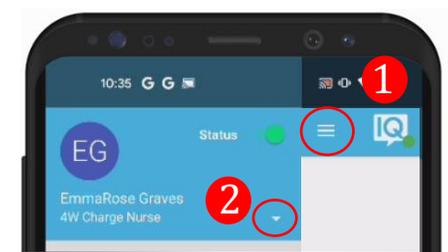

Assignable roles allow users to take on a specific role during the login process. They will remain in the role until they end their shift. The role can apply settings, add the user to a paging group, add the user to a department, or apply patient filters so that they only see patients within their department.

1. Sign into the Telmediq Mobile app.
2. Select the **role** from the Available Roles list.
  - Click the **three ellipses** to skip if no role is needed.

### Change an Assignable Role

1. Select the **three-line navigation menu**.
2. **Select** the drop-down arrow next to the role.
3. **Choose** a new role.
